1. State staff updates:
2. EPA staff updates
3. Water System Problems and State Guidance development
 - a. Staffing – operators
 - b. Supplies – CO₂, liquified oxygen(?) (used to produce ozone)
 - i. Specific question from Water Security Division while it mentions Iowa interested in confirming with other states:

“Thank you for keeping WSD informed on various supply chain issues in your region. I wanted to follow up with you regarding the status of CO₂ supply in Iowa. Previously we were told that surcharges were being applied throughout the state, ranging from \$35-\$60 per ton, along with the initial notification a month ago about a force majeure declaration from Air Gas and Chemicals. We have also noted the most recent letter from Air Gas that was sent to Blair, Nebraska, and I am assuming there are no updates on this recent development. However, could you provide an update on the following:

- 1) Are water utilities in Iowa still facing surcharges on CO2?
- 2) Is Air Gas still able to meet the demand from Des Moines?"

- c. Sampling
- d. Boil Water Situations

4. Data Management

5. EPA Guidance updates
